

Licensed Site Professional (LSP), Site Assessment and Remediation

Responsiveness, flexibility and innovation is what makes site assessment and remediation projects successful and, at CAPACCIO, that is what you receive. From having our Licensed Site Professional provide rapid response to a spill or oversee a clean up, we know that responding to your needs is the foundation of good consulting.

We also know that clean up should not be limited to off-site disposal of soil or conventional groundwater treatment systems. There are many treatment technologies and ways to apply them that have become progressively successful in cleaning up sites. Many companies have a patented treatment technology which they promote in self interest. At CAPACCIO, we objectively review all available technologies and select what is best for our client.

BENEFITS

- 24 hour a day, 7 day a week spill assistance hotline
- Cost effective remediation options
